

Microwave thawing equipment

Of course, we can provide different models with different power, just to meet your requirements. These microwave thawing equipment are of high quality and low price. If you are interested in our machines, please leave us a message.

			
25KW Microwave thawing equipment	50kw Microwave thawing equipment	75Kw Microwave thawing equipment	100KW Microwave thawing equipment

What are the advantages of microwave thawing equipment?

1. The microwave processing time is greatly shortened, which has the characteristics of short time and fast speed.
2. Our microwave thawing machine can sterilize at a lower temperature, maintaining the nutrient composition and traditional flavor of the material.
3. Of course, our company guarantees that microwave is directly used in food, and there is no additional heat loss, which saves energy to the greatest extent.
4. Surface and interior are affected at the same time, so sterilization is uniform and thorough.
5. The equipment is flexible and easy to control.
6. Whether it is microwave thawing equipment or other microwave dewatering equipment, it is guaranteed that the equipment is simple and does not need boilers or complex pipeline systems, as long as it has basic water and electricity conditions.
7. Improve working conditions and save space.
8. Meat loss rate is low, after microwave thawing , meat is easier for secondary processing.

Product Specification:

Mode	New arrival	Certification	CE
Automatic Grading	Automatically	Guarantee	1year
capacity	500 公斤/小时 500kg/hour	After-sales Service	Installation, Debugging and Training
Country of origin	China (Mailand)	Name	Microwave thawing equipment

Brand	LD	control system	PLC
Model	LD - 60KWV	place of origin	Jinan Shandong China
Voltage	220V~380V	capacity	600~750kg/ h
Power	60KW	color	Silvery white
Size (L*W*H)	12860 * 1060 *1750mm	功能 Funtion	Sterilization and thawing
weight	2T	After-sales Service	Installation, Debugging and Training

Microwave thawing Frozen whole microwave thawing is to heat up the temperature by freezing temperature ($-19 \sim -22$ C or less) rose to near freezing temperature (about $0 \sim -4$ C). Microwave thawing frozen material overall device has warmed, warmed the temperature gradient is small, that is a good temperature uniformity and need a short time, and the rate of temperature rise is easy to control and so on. These features make the Frozen thawed achieve better state. 1. Frozen overall heating energy back to temperature, reducing the temperature between Frozen thawed layer inhomogeneity, there is no recrystallization phenomenon Frozen appear as a conventional method to thaw; 2, the thawing process time is short, easy to breed bacteria and other microorganisms to grow. 3, microwave heating without thermal inertia. Frozen material by microwave heating rate controlled output power, or microwave energy supply rate, with a mutual synchronization. 4, the final temperature of the microwave thawing generally choose $-2 \sim -4$ C is appropriate, at this time no dripping Frozen, but also with a knife cutting.

Why choose Industrial Microwave Equipment?

Industrial microwave Equipment is of good quality, easy to use and environmentally friendly. Our after-sales service is thoughtful and considerate. It has been sold all over the world for several years. Many faithful customers check it out for you and order it safely. Consulting service is free before purchase, debugging and installation are free for you when purchase. Questions will be answered in time after purchase. When necessary, door-to-door maintenance and testing can be carried out. The tradition of regular return visits has also been well received. If you want to buy, please contact us in time.
